Use and efficacy of OZOILE® in Banival®

Doct. Luigi Gncachi , Dermatology in the San Gerardo Hospital in Monza and Dermatology in Dermatological Clinic, University of Milan, Bicocca

Banival® slow release emulsion in Balanitis, Balanoposthitis, Phimosis and Post Balanoposthitis with Ozoile® (Ozone topical stabilized in Oleic Acid with Vitamin E acetate). Product based on: Ozoile®, Sodium Hyaluronate, Cera Alba, Malaleuca Alternifolia Oil.

It is highly recommended in treatment of Balanitis, Balanoposthitis, Phimosis and Post Balanoposthitis thanks to its anti-inflammatory, bactericidal, fungicide, moisturizing, soothing and lubrication action. Is suitable to be used in paediatrics. It is without drug: the main component with therapeutic action is Ozoile®, which although not a drug, it has a drug-similar analgesic anti-inflammatory, bactericidal, fungicide, moisturizing, soothing and lubrication action thank to its main components (Ozonides, Molecular Oxygen, Bio-peroxides). Ozoile® has no contraindications, side effects or problems from overdosage. The product is negative to patch test, fotopatch test and cytotoxic test. To date, there are no reports of adverse reactions by the consumer to the use of products based on Ozoile®, when used under normal conditions of use and preservation.

It is recommended the use of Banival® in all patients with hypersensitivity to steroidal and non-steroidal drugs and, more generally, in those category of risk patients, with particular reference to paediatrics, in which is contraindicated the use of pharmacological molecules, as mentioned by Doct. Luigi Gncachi Dermatology in the San Gerardo Hospital in Monza and Dermatology in Dermatological Clinic, University of Milan, Bicocca during his evaluation studies presented at Meeting of 25 September 2015 “Use and efficacy of OZOILE® in Banival®.

Doct. Luigi Gncachi thanks to the important experience gained working with the use of Banival®, on 25 september 2015 explained to the Doctors (Doct. Sala Enrico, Doct. Rampello Filomena, Doct. Vercelloni Claudio, Doct. Tucci Giuseppe, Doct. Pezzuto Giorgio, Doct. Sala Iacopo, Doct. Brancaleone Wilma, Doct. Giovannini Maria Grazia), the characteristics of Banival®, emphasizing the efficacy of Banival® in the different forms of Balanitis, distinguishing between infectious forms and inflammatory and irritative forms. In addition, the Doct. Gncachi has designated the different types of treatment and recommended the Doctors that if it is not possible to make a precise diagnosis, it is preferable a therapeutic approach, which does not create problems to the subsequent diagnostic steps. Banival® has a high probability of resolution of the problem and in case of failure; it does not create any difficulties in the subsequent possible diagnostic necessity.
