The skin therapy for prevention and maintenance

in case of:

- Allergic or irritative Dermatitis
- Xerotic or itching skin
- Skin in contact with orthopaedic devices
- Prevention of Keloids
- Prevention of Ulcerations
- Tissue Regeneration

HYALURONIC ACID: It integrates the tissue regeneration attitude of the Ozonides, brings tone and turgidity, contrasts the severe xerosis.

BLACK CURRANT: Cortison – like action

RUSCUS, CALENDULA, EQUISETUM: They enhance the anti-inflammatory action of the Ozonides.

How to use
Spread the product directly all over the affected area and massage till complete absorption. We advice to apply the product twice a day or as for medical opinion.

The OZONIDES efficiently and rapidly reduce the inflammatory status, inhibit the COX, reduce the levels of Prostaglandins and activate the enzyme system of histamine degradation. 

The MOLECULAR OXYGEN re-activates the slowed down metabolic function of the mitochondrion when the cyclic lipo-oxygenation reduce the metabolic bio-availability of O2. It stimulates the tissue reparation.

The BIO-PEROXIDES act as bactericide, fungicide and against viruses.

On skin and mucous

How to use
Spray homogeneously the product directly on the affected area till its complete coverage. We advise to apply the product twice a day or as per medical opinion. As antiseptic spray the product directly on the area and remove the eventual arise of pus with a sterile gauze. As tissue regeneration spray directly on the affected area in association with Rigenoma Cream to apply directly on the wound edge. In case of patch apply the product once on alternate days. The treatment period varies according to the treated area and the rapidity of the therapeutic feedback.
